INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/IB2004/003589

Re Item V.

1 The following documents are referred to in this communication:

D1: US 5 012 629 A (REHMAN ET AL) 7 May 1991 (1991-05-07)

D2: EP 0 943 544 A (DIMA S.R.L) 22 September 1999 (1999-09-22)

D3: EP 0 432 126 A (CLOUD CORPORATION) 12 June 1991 (1991-06-12)

Document D1, which is considered to represent the most relevant state of the art, discloses a filter pod packaging machine comprising a wheel rotating about a horizontal axis and having circumferentially spaced recesses for the production of the pods.

From this, the subject-matter of independent claim 1 differs in that the machine has an intermittently rotating polygonal prismatic wheel with each flat face comprising at least one recess corresponding to the size and shape of a pod.

- 2.1 The subject-matter of claim 1 is therefore novel (Article 33(2) PCT)
 The problem to be solved by the present invention may be regarded as providing a machine which produces pods with a constant shape and compactness.
- 2.2 The solution to this problem proposed in claim 1 of the present application is considered as involving an inventive step (Article 33(3) PCT) because there is no suggestion in the available prior art to use a polygonal prismatic wheel, which provides for recesses which exactly match the size and shape of the pods to be produced.
- 2.3 Claims 2-12 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.
- 3 Claim 13 relates to a pod obtained with the machine of claim 1, which is therefor new and inventive for the same reasons as for claim 1.
